

SELFIE AI™ Brand Guide

1. Brand Overview

Mission Statement

SELFIE AI™ helps women who feel stuck rediscover their confidence, build a personal brand, and start making money—all without complicated tech or gimmicks.

Brand Promise

“Seen. Paid. Powerful.” We create a premium, editorial-style experience that feels like chatting with a trusted friend who tells you exactly what to do—no fluff, just real steps.

Target Audience

- Women going through a big life change (breakup, career shift, confidence dip)
 - Coaches, creators, service providers, aspiring entrepreneurs
 - Ready to share their story and make money online
 - Want a simple, elegant system, not hustle culture or spiritual jargon
-

2. Brand Personality & Voice

Tone & Attitude

- **Straightforward & Helpful:** “Here’s what works—no sugarcoating.”
- **Friendly, Like a Good Friend:** “Hey, I’ve been there. Let’s fix this.”
- **Grounded, Not Spiritual:** Real-life advice without woo-woo stuff.

Key Voice Characteristics

1. **Short, clear sentences**

2. **Everyday language** (e.g., “Let’s do this step by step.”)
3. **First-person when Sandra speaks** (“I want you to feel proud.”)
4. **Minimal emojis**, only when they add a bit of warmth (e.g., “✨” or “😊”), not too many.

Words We Use

- “confidence,” “brand,” “story,” “real talk,” “easy steps,” “results”
- Avoid jargon: no “synergy,” “leverage,” “grind,” or “manifest.”

3. Visual Identity

3.1. Color Palette

Define these in your *tailwind.config.js* or a *brand.css* file under */styles*.

Color Name	Hex	Usage
Black	#000000	Main backgrounds, headlines, buttons
White	#FFFFFF	Text on dark backgrounds, negative space
Soft Beige	#F5E6DC	Accent backgrounds, highlights, hover states
Light Gray	#CCCCCC	Secondary text, borders, separators
Dark Gray	#222222	Body text on white backgrounds

js

KopierRediger

// Example tailwind.config.js excerpt

```
module.exports = {
  theme: {
    extend: {
      colors: {
        primary: "#000000",
        background: "#FFFFFF",
        accent: "#F5E6DC",
```

```
    grayLight: "#CCCCCC",
    grayDark: "#222222",
  },
  fontFamily: {
    heading: ["Prata", "serif"],
    body: ["Helvetica Neue", "sans-serif"],
  },
},
},
};
```

3.2. Typography

- **Headings** (H1, H2): Prata Bold
 - Size: 48px (desktop) / 32px (mobile)
 - Letter-spacing: 0.5px
- **Subheadings** (H3, H4): Prata Regular
 - Size: 32px (desktop) / 24px (mobile)
 - Letter-spacing: 0.3px
- **Body Text:** Helvetica Neue or system sans-serif
 - Size: 16px / line-height 1.5
 - Captions/Labels: 14px / letter-spacing 0.2px

3.3. Imagery & Photography

- **Hero Images**
 - Black-and-white, editorial style.
 - Overlay: subtle gradient from transparent to semi-opaque black at bottom, with white Prata headline on top.

- **Before & After Grid**

- 3×3 layout: left side in grayscale (“Before”), right side in full color (“After”).

- **Icons & Logo**

- Logo: “SELFIE AI™” in Prata Bold, all caps, black on white or white on black.
- Icons: simple line icons (arrow, check, calendar) in black or white depending on background.

- **Photography Style**

- Natural, authentic: soft light, close-up faces, clean backgrounds.
- Full-color shots should feel warm yet slightly desaturated for a luxe look.

4. UI & UX Guidelines

4.1. Layout & Spacing

- **Grid:** 12 columns with 24px gutters.
- **Spacing Scale** (Tailwind style):
 - p-4 = 16px
 - p-6 = 24px
 - p-8 = 32px
 - p-12 = 48px
- **Section Margins:** 48px top/bottom (mt-12, mb-12).
- **Content Padding:** 24px (p-6) on desktop, 16px (p-4) on mobile.

4.2. Buttons & CTAs

- **Primary Button** (e.g., “Generate Story Arc”)
 - Background: Black (#000000)
 - Text: White (#FFFFFF), Prata Bold, 16px
 - Padding: 16px vertical, 32px horizontal (p-4 px-8)
 - Hover: Background changes to Soft Beige (#F5E6DC), text switches to Black
- **Secondary Button** (e.g., “Copy to Clipboard”)
 - Background: White (#FFFFFF), border: 1px Black
 - Text: Black, Helvetica Neue, 14px
 - Hover: Background Black, text White

4.3. Forms & Inputs

- **Inputs/Fields**
 - Border: 1px Light Gray (#CCCCCC), border-radius: 4px
 - Padding: 16px (p-4)
 - Font: Helvetica Neue, 16px
 - Focus: Border turns Black, no default outline
- **Textareas**
 - Same as inputs, but min-height: 120px, line-height: 1.5

4.4. Navigation

- **Header Bar**
 - Height: 64px, background: Black (#000000), fixed on scroll
 - Logo left (24px height), nav links (Helvetica Neue, 16px, White), spaced ~32px apart

- **Footer**

- Background: Dark Gray (#222222), text: Light Gray (#CCCCCC)
- Links: Helvetica Neue, 14px, underline on hover

4.5. Mobile-First Details

- Breakpoints:
 - **sm**: ≥640px
 - **md**: ≥768px
 - **lg**: ≥1024px
 - Hamburger menu for screens ≤768px.
 - Touch targets ≥44×44px for buttons and interactive elements.
 - For image editors (Visual Studio), enable horizontal swipe for presets using `overflow-x: auto` and `-webkit-overflow-scrolling: touch`.
-

5. Sample Page Templates

5.1. Homepage / Hero Section

- **Hero Banner Image**: Full-width, height ~60vh, black-and-white editorial photo.
- **Overlay Text**:
 - H1: “SELFIE AI™” (Prata Bold, 56px desktop / 36px mobile)
 - Subheading: “Build your future self, one selfie at a time.” (Helvetica Neue, 18px desktop / 16px mobile)
- **CTA Button**: “Join the Waitlist” (primary style), centered under subheading.

5.2. 3-Post Story Arc Page

- **Title:** “3-Post Story Arc” (Prata Bold, 48px desktop / 32px mobile)
- **Subtitle:** “Turn your story into a sequence that connects.” (Helvetica Neue, 18px / 16px)
- **Input Area:**
 - Bordered container, 16px padding (p-4), placeholder: “Tell me your struggle, turning point, and win—at least 20 characters each.”
- **Generate Button:** Primary style, labeled “Create My Story Arc.”
- **Results Section:**
 - Each post in a bordered box (1px Light Gray), headline in Prata Bold 24px, body in Helvetica Neue 16px.

5.3. Starter Kit Module

- **Header:** “Welcome to the Starter Kit” (Prata Bold, 48px)
- **Three Cards** (stack on mobile, side-by-side on desktop):
 - Icon (simple line icon in Black)
 - Title (Prata Bold, 24px)
 - Short description (Helvetica Neue, 16px)
 - Button (secondary style) labeled “Start Story Prompts,” “Start Caption Formulas,” or “Start Confidence Exercises.”

5.4. Dashboard

- **Metrics Row:** Two cards next to each other (on desktop), each with:
 - Title (Helvetica Neue, 14px)
 - Big Number (Prata Bold, 32px)
 - Body text (Helvetica Neue, 14px)
 - Card background: White, border: 1px Light Gray, border-radius: 8px.

- **Next Step Button:** Primary style, labeled based on user state:
 - “Complete Starter Kit”
 - “Upgrade to PRO”
 - “Go to PRO Features”
-

6. Asset Guidelines

6.1. Logo Usage

- Always use the SVG or high-res PNG from </assets/images/logo.svg>.
- Keep clear space of at least the logo’s height on all sides.
- Do not stretch, recolor, or rotate the logo.

6.2. Photography Style

- **Black & White Editorial:** Hero and portrait shots. Use full height or wide crop depending on layout.
- **Warm-Tone Color:** Selfies and “After” images; slightly desaturated for a refined, premium feel.
- **Before & After Grid:** 3×3 layout—left column in grayscale (“Before”), right in color (“After”).

6.3. Iconography

- Simple line icons, 1px stroke, in Black (on white background) or White (on black background).
 - Store all SVGs in </assets/icons/> with clear names (e.g., [icon_arrow.svg](#), [icon_calendar.svg](#)).
-

7. Interaction & Micro-Animations

Hover States

- **Buttons:** Transition background from Black to Soft Beige over 200ms, text from White to Black.
- **Links:** Underline fades in on hover, text boldens slightly.

Loading & Transitions

- **Loading Spinners:** Use a small black dot spinner on a semi-transparent white overlay while AI is generating.
- **Modal Animations:** Fade in from 0 to full opacity over 200ms, with a slight slide-down (10px) at the start.

Swipe Gestures (Mobile)

- For Visual Studio presets: wrap the preset buttons in a container with `overflow-x: auto` and `-webkit-overflow-scrolling: touch`.
 - Ensure each preset button is at least 44×44px so it's easy to tap.
-

8. Implementation Notes

1. Fonts & Color Tokens

- Make sure your `tailwind.config.js` (or `brand.css`) has the exact HEX values and Prata/Helvetica stacks.
- Keep this file in `/styles` so any developer or AI tool can reference it.

2. Central Image Registry

- Use `ImageRegistry.ts` (see Document 2) so all components pull images from one place.

- Only local files should be two placeholders: `placeholder.jpg` (1×1 pix white) and `video-placeholder.png`.

3. Environment & Secrets

- Store API keys (OpenAI, Stripe, Cloudinary, etc.) in Replit Secrets—not in code.

Example env vars to set:

```
ini
KopierRediger
SUPABASE_URL=...
SUPABASE_ANON_KEY=...
OPENAI_API_KEY=...
STRIPE_SECRET_KEY=...
CLOUDINARY_CLOUD_NAME=...
MUX_ENV_KEY=...
MAILCHIMP_API_KEY=...
ALGOLIA_APP_ID=...
ONE_SIGNAL_APP_ID=...
TWILIO_SID=...
GOOGLE_CLIENT_ID=...
GOOGLE_CLIENT_SECRET=...
GOOGLE_REFRESH_TOKEN=...
```

○

4. Developer / AI Handoff

- When you give this guide to the Replit AI agent, make sure it has:
 1. `/styles/tailwind.config.js` with color & font tokens
 2. `/assets/images/placeholder.jpg` & `video-placeholder.png` (local placeholders)
 3. `/config/ImageRegistry.ts` (with external URLs)
 4. This Brand Guide PDF in `/brand/docs/Brand_Guide.pdf`
